OBJECTIVE

Aspiring AI/ML professional seeking a challenging role to leverage my skills in Langchain, LangGraph Machine learning, and Problem-Solving, contributing to innovative solutions and organizational growth.

EDUCATION

- ❖ Sarvajainik College of Engineering & Technology 2021-2025
 - B.Tech – CSE CGPA : 9.05
- ❖ Shri G. J. Bhakta Higher Secondary School 2019-2021
 - HSC 90%

TECHNICAL SKILLS

- ❖ **Programming:** Python, Java, C
- ❖ **Data Science:** Numpy, Pandas, Scikit-learn ,Matplotlib ,Seaborn
- ❖ **AI/ML :** LangChain, LangGraph, FastAPI, TensorFlow, OpenCV, Mediapipe
- ❖ **Databases:** PostgreSQL, MySQL ,MongoDB
- ❖ **Software:** MS Office, Visual Studio, Pycharm, Jupyter Lab

EXPERIENCE

- ❖ **Skyline Infosys (AI Engineer Intern)** Jan 2025 – May 2025
 - Gaining hands-on experience with various AI technologies, including data preprocessing, model optimization, and algorithm selection.
- ❖ **Kukami Technology (AI/ML Engineer)** June 2025 - Present
 - Developed and maintained backend systems for multiple AI-driven applications including AI Math Tutor, Document Summarizer, Resume Analyzer, Interview Assistant, PPT Generator, and Graph Generator using FastAPI and scalable API architectures.
 - Designed and deployed ML models and LLM integrations for NLP tasks such as text summarization, question generation, similarity matching, and structured content generation.
 - Built a Sales Forecasting model using machine learning techniques to analyze historical sales data, perform trend analysis, and generate predictive insights to support business decision-making.
 - Optimized API performance, implemented efficient data pipelines, and ensured seamless integration of AI models into production environments with scalable and maintainable system design.

PROJECTS

- ❖ **AI MATH – Intelligent AI Math Tutor Backend**
 - Developed a scalable AI-powered mathematics tutor backend using FastAPI and PostgreSQL (Async SQLAlchemy), enabling step-by-step problem solving, conversational math tutoring.
 - Integrated LLMs implement Scan & Solve functionality for extracting and solving math problems from images with contextual explanations.
 - Designed and implemented real-time Learning Groups, Live Quizzes, Daily Challenges, and leaderboards using Socket.IO, integrating engagement-driven reward mechanisms, dynamic ranking systems, and community interaction features.
 - Designed a clean, modular backend architecture separating API routes, service logic, and database models, ensuring efficient code organization and easier feature expansion.

❖ AI PPT Generator

- Developed an AI-driven PowerPoint Generator that dynamically creates presentation content using LLMs and generates customizable .pptx files via FastAPI-based backend APIs.
- Implemented automated file conversion pipelines (PPT to PDF using LibreOffice, PDF to PNG/JPG using ImageMagick) enabling multi-format export and scalable content delivery.
- Designed modular service architecture with session management, template handling, and RESTful API integration to ensure efficient content generation and production-ready deployment.

❖ AI Resume Analyzer & Interview

- Built an AI-powered Resume Analyzer & JD Matching system using FastAPI, enabling similarity scoring, ATS-friendly feedback, and keyword gap detection.
- Developed an AI Interview Bot that generates questions, and evaluates responses on relevance, clarity, and confidence.
- Implemented a PDF Report Generator with Jinja2 and wkhtmltopdf to produce professional reports covering resume analysis, interview evaluations, and actionable feedback.
- Integrated LLMs and Redis for scalable AI-driven workflows, session management, and end-to-end automation of recruitment assistance.

❖ Voice Email Agent | [Link](#)

- Developed a voice-based system that allows users to send emails using spoken commands.
- Implemented secure user authentication and ensured reliable email delivery.
- Streamlined the email sending process by enabling hands-free operation for users in various environments.

❖ AI Document Summarizer & QnA | [Link](#)

- Developed a web app for document analysis and Q&A using LangChain, supporting PDF, DOCX, and TXT uploads.
- Enabled intelligent summaries, specific question answering, and summary downloads with optimized performance.
- Designed a responsive, user-friendly interface with smooth animations and efficient caching.

❖ Hands-Free Virtual Mouse | [Link](#)

- Developed a hands-free virtual mouse using MediaPipe and OpenCV for precise hand tracking and intuitive gesture controls.
- Enabled functionalities like left/right clicks, double clicks, drag & drop, and screenshots.
- Integrated PyAutoGUI for seamless operations and optimized for real-time, responsive performance.

CERTIFICATIONS

- ❖ Microsoft CSR training intern
